- Portfolio Site.

What is a portfolio site

- An online portfolio is an online representation of work you have created, as well as your skills and experiences. It could be a website, blog, or even a video channel.

- In this we can represent the skills what we have.

- Sometimes it becomes important then the resume when recruiting for a desired job.

- A portfolio website is a unique way to showcase your work and let others know about yourself.

- It's like an evergreen platform for your projects, case studies, and information about you.

- In addition, it's one of the best ways to express your personality, experience, and capabilities.

- I have done a portfolio of a web developer using the Front-end development tools.

- Using the bootstrap framework I have developed a portfolio site.

Working with bootstrap

- To work with bootstrap we should add the extension of called live server to the visual studio code.

- While we are working with it provide us with a port so that we can use that for doing documentations and testing purposes.

Bootstrap Tools

- Cards **-** Bootstrap's cards provide a flexible and extensible content container with multiple variants and options.

- I have used bootstrap icons from the bootstrap icons site.

- Bootstrap provides different features like adding cards to the webpage and icons.

- While doing the project I have imported the google fonts into the website.

- Bootstrap involves importing the animations to the webpage using the JS and CSS libraries.

- Some of the attributes used to animate the web page are data-aos.

Hi There

A Professional Web Developer

This is the website I have created

- This is the link that contains the code I have used to develop the website.
